EPA OFFICE OF WATER

Internships and Fellowships

Who Are We?

EPA's Office of Water employs a diverse group of professionals in a variety of career disciplines, including physical scientists, engineers, statisticians, policy analysts, and computer scientists. We restore, protect, and preserve the nation's waters as:

- * Healthy, sustainable ecological systems.
- * Recreational resources.
- * Sources of food and drinking water.

What Do We Do?

- * Protect over 3 million miles of rivers and streams; over 40 million acres of lakes; over 87,000 square miles of estuaries; 95,000 miles of coastal waters; and marine waters.
- * Develop national programs, policies, and regulations relating to drinking water, water quality, groundwater, and water security.
- Develop criteria and standards for evaluating water quality.
- * Lead, support, and evaluate regional, state and tribal water activities.
- * Provide technical assistance and technology transfer programs.
- * Offer training in water quality, economic, and long-term environmental analysis.

A Great Place to Work!

In the Office of Water, you would have an opportunity to make a difference while gaining real world experience in the workplace:

- Contribute: Work in your area of interest, put your academic knowledge into practice, while making a real contribution to the Office of Water's goals.
- **Learn:** Gain first hand experience with the many facets of work in the Office of Water, learning from experienced professionals.
- Grow: Participate with professional colleagues on specific projects and find out about the diversity of career paths.
- **Discover:** Our headquarters office in downtown DC is steps away from the Capitol, museums of the National Mall, as well as historic monuments.
- Metro: The headquarters office is located at the Federal Triangle Metro stop, and is easily reached by Metro bus as well, providing easy commuting.

I am especially proud of the dedication and caliber of the Office of Water's employees. They have a commitment to innovative and collaborative approaches that advance the goals of clean and safe water, as well as healthy communities and ecosystems. Without the high level of professionalism I witness daily, we would be unable to protect, restore and conserve our Nation's waters and wetlands.

- Benjamin H. Grumbles Assistant Administrator for the Office of Water

What's a typical day like?

The Office of Water is a highly interactive environment, where you can expect to work on a variety of challenging environmental projects. You are likely to spend your time working on teams consisting of colleagues with diverse expertise as well as working independently. You will also work with committed colleagues from other parts of EPA and stakeholders.

What is my salary likely to be?

Compensation varies according to the terms of each of the student programs. You can find more information about each program by visiting the "Links for Intern and Fellowship Opportunities" section of our web site: www.epa.gov/ow/careers

What is my schedule likely to be?

EPA offers a variety of work schedules, and students' schedules may also have flexibility to accommodate academic needs. Visit the web site listed above for more information.

What are my chances for a permanent position?

The Office of Water provides opportunities for participants in student internships and post-graduate positions to compete for permanent positions. Those opportunities depend on the terms of the internship and the student's own academic schedule.
